

Experiment 8: Storyboard Design for Food Delivery Mobile App

Name: Loga Prabha GB

Roll No: 240701290

Aim

To create storyboards representing the user flow for a food delivery mobile application.

Objective

- To visualize user interaction in a food delivery app.
- To represent the sequence of tasks performed by users.
- To improve navigation and usability through storyboard design.

Description

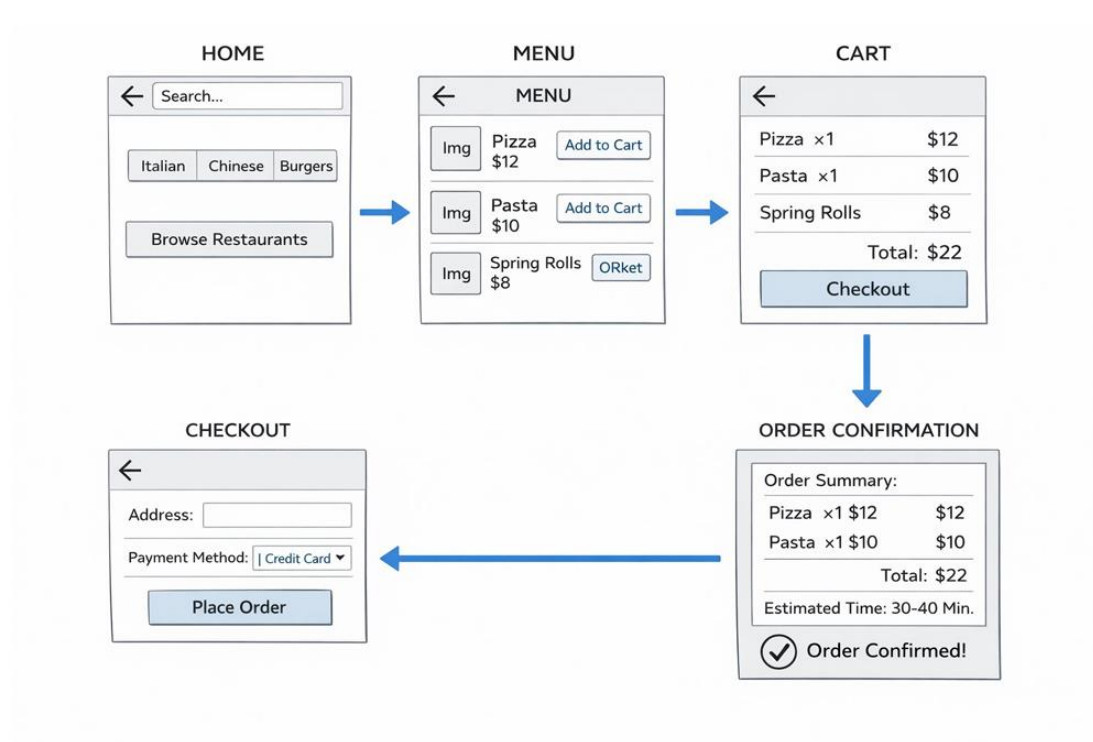

The experiment includes creating storyboard screens that represent the complete ordering process in a food delivery application.

HCI Principles Used

- Consistency
- Simplicity
- Visibility
- Feedback
- Easy navigation

Screens Included

1. Search Restaurant Screen
2. Restaurant Menu Screen
3. Cart and Total Screen
4. Delivery Information Screen
5. Payment and Order Summary Screen
6. Order Confirmation Screen

Food Ordering Wireframe

User Flow

Step 1 – Search Food

User searches for food categories such as pizza, burger, and Chinese food.

Step 2 – Select Restaurant

User selects a restaurant from the available list.

Step 3 – Choose Food Items

Food items are displayed with price and ratings.

Step 4 – Add to Cart

Selected items are added to the cart and total amount is calculated.

Step 5 – Enter Delivery Details

User enters address and phone number.

Step 6 – Payment

User selects payment methods such as Cash on Delivery, Credit Card, or UPI.

Step 7 – Place Order

User confirms and places the order.

Step 8 – Order Confirmation

The app displays order confirmation and tracking details.

Result

The storyboard successfully represented the complete user flow of the food delivery application and improved understanding of user interaction and navigation.
